

Eight-Session Batch Plan

184 participants, grouped so that every room shares one learning thread

Working note
v3.0 · 23 Sep 2026
Internal — pre-scheduling

Eight sessions gives enough room to group people by **what they will actually be learning**, rather than by whichever department label they carry. Every room below has **one topic thread that runs the full three hours**, and no room contains a department that cannot follow it. Room sizes land between 17 and 39 with a median of 23 — **workshop size, not lecture size**, which is where engagement comes from. The eight sessions fall into four families that share teaching material, so preparation is built once per family and reused across its sessions.

THE EIGHT SESSIONS

FAMILY	SESSION	DEPARTMENTS	HEADS	THE LEARNING THREAD THAT RUNS THE WHOLE SESSION
A · Winning work Documents in, priced response out	1 · Tendering & Contracts	Contract & Tendering 22 · Business Development 1	23	Reading very long tender documents fast, pulling out obligations, risks and eligibility, drafting pre-bid queries and client correspondence.
	2 · EPC Bids & Design-Build	EPC 19	19	Same document skills, but for bids where Suroj does the design itself — specifications written in-house, scope and interface boundaries, design-stage risk.
B · Numbers, drawings & systems Checking and reporting what others produced	3 · Accounts & Finance	Accounts 39	39	Pulling data out of invoices and statements, reconciling large sets, spreadsheet analysis, compliance and notice handling, safe treatment of confidential data.
	4 · Cost, Planning & Systems	Cost Control 11 · Planning 9 · EDP 6	26	Large spreadsheets into clean insight, budget-versus-actual and schedule analysis, dashboards, monthly reporting upward, and the systems all of it lives in.
	5 · Design, Drawings & Quantities	MEP 12 · Quantity Surveyor 4 · Documentation & Engg Coordination 2	18	Working from drawings and specifications, take-off and quantity checking, bar bending and bills of material, drawing revisions, and long project correspondence trails.
C · Running site & materials Information created at site, compiled monthly	6 · Procurement & Stores	Purchase 11 · Store 6	17	Requisitions and specifications, comparing vendor quotations, purchase orders and follow-up, receipts and issues, stock records and consumption.
	7 · Plant, Execution & Compliance	V&M 5 · Mechanical 3 · Operation 3 · EHS 3 · Precast 1 · Quality 1 · Shuttering & Formwork 1	17	Logbooks and machine records, preventive maintenance and statutory documents, inspection checklists and observations, and compiling all of it into a monthly report.
D · People & communication	8 · People, Admin & Communication	HR & Admin 23 · Branding 2	25	Drafting and tone, internal and external communication, policy and document generation, presentations and content, people records and reporting.

EVERY DEPARTMENT IS WHOLE, AND EVERY PERSON IS PLACED

All 184 reconcile exactly. No department is split across two rooms — V&M and EDP, which Suroj's draft divided in half, are each whole again. **No session exists for a handful of people:** the smallest room is seventeen. Quality, Precast, Business Development, Shuttering and Branding are each one or two people and each sits in the room whose subject they can follow all afternoon.

THE QUESTIONING SESSION IS BUILT IN, NOT BOLTED ON

Suroj's draft kept a separate department-wise questioning session at the end. With eight coherent rooms it works better as **the closing twenty minutes of each session** — questions get answered while the demo is still on screen and the department is still together, rather than weeks later in a shared room.

Each room was formed by asking one question: **what is the single skill this group will practise for three hours, and can every person in the room practise it on their own work?** Where the answer needed two different skills, the room was split. Where a department was too small to stand alone, it joined the room whose skill it already uses.

SESSION BY SESSION

SESSION	WHY THESE DEPARTMENTS BELONG TOGETHER	WHY THEY ARE NOT SOMEWHERE ELSE
1 • Tendering & Contracts	One department plus Business Development, which is one person working the same funnel — pursuit and bidding are the front and back of the same activity.	Split from EPC because although both bid, they bid differently: Tendering works from drawings and specifications supplied by the client's consultant.
2 • EPC Bids & Design-Build	Nineteen people doing one thing. On EPC work Suroj designs the structure itself and writes the specification, so the bid carries design risk that an item-rate bid does not.	Kept separate from Session 1 so the examples can use real EPC scope and interface problems rather than being diluted to suit both bid types.
3 • Accounts & Finance	A single department of thirty-nine doing one job, with the tightest data-handling constraints in the company. Every example lands with everyone.	Cannot usefully merge with anything — its subject matter, its volume and its confidentiality rules are shared with no other function.
4 • Cost, Planning & Systems	Cost Control and Planning run the same monthly cycle on the same kind of spreadsheet and report to the same people. EDP joins them because it builds and runs the systems that data sits in, so every example is something EDP will later be asked to automate.	Cost Control was in Suroj's Materials session and Planning in Session 1 — separated from each other despite being the closest pair in the organisation.
5 • Design, Drawings & Quantities	Everyone here starts from a drawing or a specification and ends with a quantity, a schedule or a released document. One example set — take-off, checking, revisions, correspondence — covers all eighteen.	Separated from cost and planning because the input is different: this room works from drawings, the other from spreadsheets. Similar-sounding, genuinely different craft.
6 • Procurement & Stores	The two ends of the same chain — what is ordered and what arrives. Comparing quotations, chasing delivery, receiving and issuing, and reconciling what was booked against what was consumed.	Kept apart from plant and execution so the examples can stay on buying and holding material rather than splitting attention across machines and inspections.
7 • Plant, Execution & Compliance	Seven small functions that all run on records written at site and compiled at head office every month — machine logbooks, maintenance and statutory papers, inspection checklists, safety observations. A single example on capturing and compiling site records serves all seventeen.	These were scattered across Suroj's Sessions 1 and 4, several of them one or two people lost in a room of forty-six. Together they make a real audience with a real shared problem.
8 • People, Admin & Communication	Drafting, tone, documents, policy, presentations and records. Branding's two people sit here because content and communication are exactly what this room is practising.	Unchanged from Suroj's own Session 5, which was already right.

WHAT THE FOUR FAMILIES BUY

FAMILY	SHARED TEACHING MATERIAL ACROSS ITS SESSIONS
A • Winning work Sessions 1–2 • 42 people	One long-document example set built once and used twice, with the second session swapping in EPC-specific scope and design material. Roughly one preparation for two sessions.
B • Numbers, drawings & systems Sessions 3–5 • 83 people	Shared spine on spreadsheet analysis, checking someone else's numbers, and turning analysis into a report for management. Each session changes only the source document — ledger, monitoring sheet, or drawing.
C • Running site & materials Sessions 6–7 • 34 people	Shared spine on chasing information from site, compiling it and spotting what does not reconcile. Session 6 runs it on purchase and stock records, Session 7 on machine and inspection records.
D • People & communication Session 8 • 25 people	Standalone. Drafting, documents and content, with people records as the data example.

HOW THIS COMPARES WITH THE PLAN SUROJ SHARED

MEASURE	SUROJ'S DRAFT	EIGHT-SESSION PLAN	WHY IT MATTERS
Teaching sessions	5 plus a questioning session	8 with questions built into each	Three more sessions, and every one of them a room that can be taught from a single example set.
Largest room	46, drawn from twelve departments	39, drawn from one department	Size was never the problem. A room of thirty-nine accountants follows every example; a room of forty-six mixed departments follows none of them.
Median room	39	23	Twenty-three is a size where people ask questions and try things. Forty is a size where they watch.
Departments per room	Up to 12	Up to 7, all sharing one record type	The seven in Session 7 are small functions that genuinely share a monthly reporting problem — not twelve unrelated ones sharing a label.
Split departments	V&M and EDP each halved	None	Halved departments learn two different things and cannot help each other afterwards.
Orphaned people	Quality 1 and EHS 3 inside a room of 46	None; smallest room is 17	Every person is somewhere the subject reaches them.

SUGGESTED RUNNING ORDER

ORDER	SESSION	REASON FOR THIS POSITION
First	1 · Tendering & Contracts	The strongest and most visible result available anywhere in the programme — a very long tender document read and mapped in minutes. Start where the reaction will be strongest, because word travels internally before session two.
Then	2 · EPC · 4 · Cost, Planning & Systems	Both groups are already comfortable with structured data and tools, so adoption is quick and the early momentum holds.
Middle	3 · Accounts · 5 · Design & Quantities	The two largest bodies of detailed, high-volume work. Best run once the internal examples from earlier sessions can be quoted back.
Last	6 · Procurement & Stores · 7 · Plant & Compliance · 8 · People & Communication	These groups have the least prior exposure to AI tools. Running them last means the trainer arrives with worked Suroj examples from six earlier sessions rather than generic ones.

QUESTIONS TO SETTLE BEFORE THIS IS LOCKED

1. MEP (12) is the largest single unit being moved and nobody from it attended a discovery call. It sits in Session 5 on the assumption that it is design and drawing coordination. **If MEP is mainly site execution, it belongs in Session 7 instead** — this one answer changes two rooms. **2.** Same question, smaller stakes, for **Operation (3), Mechanical (3), Quantity Surveyor (4) and Precast (1)** — all placed on department name alone. **3.** Quality is listed at **1** and EHS at **3**. Against forty sites and three ISO certifications that reads like head-office-only counting. If site QA/QC and safety officers are included, Session 7 grows and may deserve to split. **4. Suroj Modular appears nowhere in the 184**, yet its production, sales and costing people all attended discovery. Out of scope, or missed? **5.** Are Planning (9) and Cost Control (11) separate teams or one team under two labels? If one, Session 4 is simpler than assumed. **6.** Accounts at **39** is the only room above thirty. It works as one room because everyone in it does the same job — but if Suroj would rather have two rooms of twenty, that is a ninth session and a clean decision to take on its own.

The one-line version. Five sessions forced three compromises: cost and planning sat apart, drawings and spreadsheets shared a room, and seventeen people's worth of small site functions were scattered across two rooms that were not about their work. **Eight sessions removes all three** — and brings the median room from thirty-nine down to twenty-three, which is the difference between a group that participates and a group that attends.
